

High shear mixer Rotolab (IMA, Italy)

The Rotolab is a bench top high shear granulator for wet and melt granulation process and single pot processor. The machine allows the entire process of any type of product, from loading of raw materials to discharge of dry granules, to be carried out in a single, contained bowl, thus eliminating contact between product, operator and environment. The instrument is designed for applications mainly in pharma and food fields for increase of flowability, increase of compressibility, solid dosage form production, slow release or fast dissolving.
